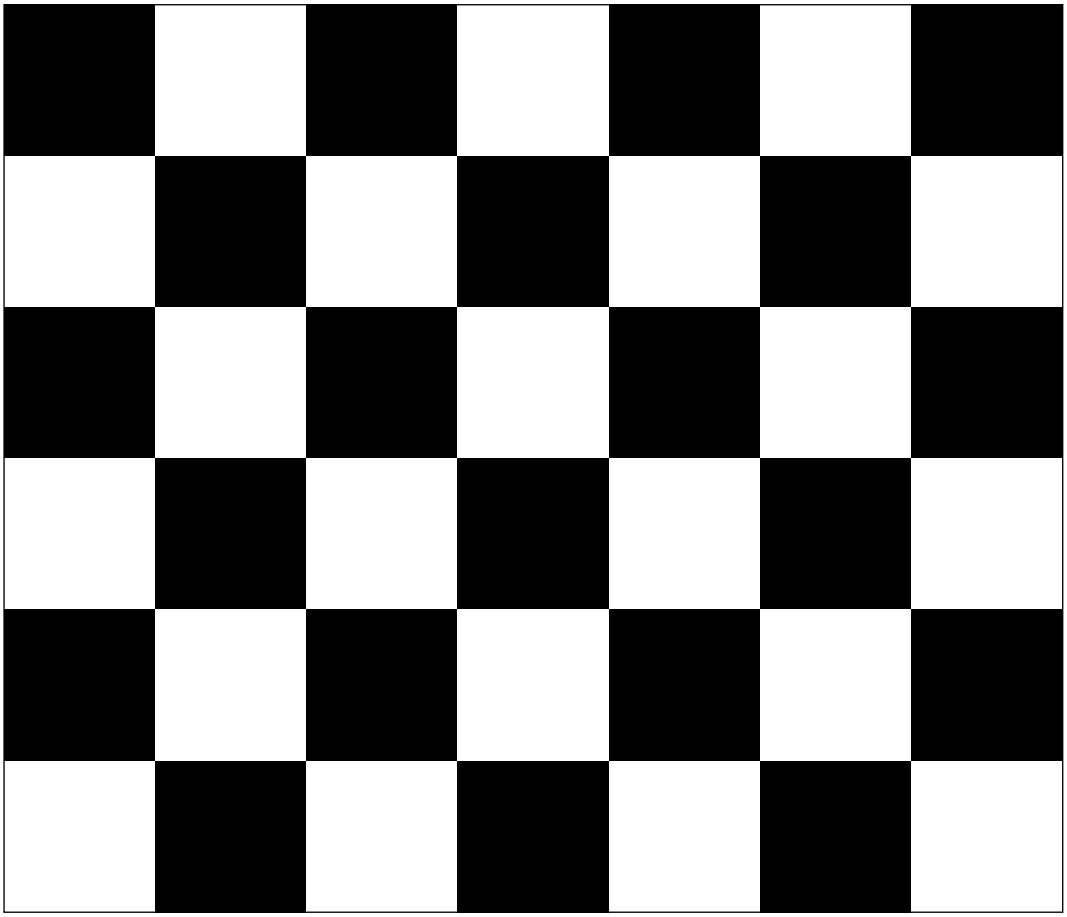
CIB Automated Sorter — Overhead Camera Calibration Target

Checkerboard: 7x6 squares | Square: 20mm x 20mm | Inner corners for OpenCV: 6x5 | Board: 140mm x 120mm



<———— 100 mm ————>

HOW TO PRINT AT CORRECT SIZE:

1. Open this PDF in Adobe Reader (NOT the browser — browser PDF viewers scale incorrectly).
2. File -> Print -> under 'Page Sizing & Handling' select 'Actual Size'.
3. Do NOT use 'Fit', 'Shrink', or 'Fit to Printable Area'.
4. Print, then measure the black bar above. It must be exactly 100 mm.
5. If not 100 mm, check printer driver scaling (Printer Properties -> no scaling).
6. Once correct: laminate the sheet and place flat in the sorting dish.

Note: OpenCV findChessboardCorners detects the 6x5 = 30 inner corners (black/white junctions). The asymmetric board (7 cols x 6 rows — not square in count) lets OpenCV determine orientation unambiguously.
